O1-180, O1-184 and O1-236 polypeptides and nucleic acids encoding useful for evaluating potential contraceptives to block ovulation reversible manner. them,

Claim 2; Fig 1; 54pp; English.

The present sequence is the cDNA encoding the mouse cocyte-specific protein O1-180, expressed in the cocytes of primary (one-layer) preantral follicles through ovulation. It provides in vitro and in vivo reagents for studying ovarian development and function. This sequence has

Agents which modulate O1-180, O1-184 and O1-236 may be used to treat cell proliferative or degenerative disorders, associated with abnormal expression of these ovary specific genes. This ovary-specific sequence can be used as reagents to evaluate potential contraceptives, to block ovulation in a reversible manner. It is also used to screen for genetic mutations in signalling pathways, that are associated with some forms of human infertility or gynaecological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Local Sim hes 1276;

The present sequence is that of murine ovary-specific O1-180 cDNA CC obtained from a mouse ovary cDNA library. O1-180 clones were initially condensified in a subtractive hybridisation screen using ovaries from Gdf9 cc identified in a subtractive hybridisation screen using ovaries from Gdf9 cc knockout and wild-type mice. The O1-180 gene (see ABZ24590) on chromosome CC is also provided. Loss of O1-180 results in female infertility and cc subfertility. The invention provides ovary-specific and cocyte-specific cc murine and human O1-180, O1-184 and O1-236 polymicleotides and cocyte-specific cc polypeptides. These genes and their protein products appear to relate to compours cell proliferative or degenerative disorders, especially those cc involving ovarian tumours, such as gremative disorders, and granulosa cell ct tumours, or infertility, such as premature ovarian fallure. The invention crowides a method for detection of as cell proliferative or degenerative of sorder of the ovary, which is associated with the expression of O1-180, O1-184 or O1-236. It also provides a method for treating such disorders cof o1-180, O1-184 or O1-236, and a method of screening for compounds that compounds are possible contraceptive or fertility enhancing agents. These compounds are possible contraceptive or fertility enhancing capents. The modulator is preferably a polypeptide, small molecule or compounded as the contraceptive or fertility enhancing agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 1250;

                                                                                                                                                                                                                                                                                                                                 of novel murine ovary-specific gene 01-180 (see ABZ24590). The major of inference between the 01-180 gene and pseudogene is a 13-nucleotide gap in exon 1 of the pseudogene, which is expected to cause a frameshift and carly termination in exon 2 of the pseudogene. The sequences of exon 2 are identical in the 01-180 gene and pseudogene. The sequences of exon 2 mutations in exons 3 and 4. The invention provides ovary-specific and cocyte-specific murine and human 01-180, 01-184 and 01-236 polynucleotides and polypeptides. These genes and their protein products polynucleotides and polypeptides. These genes and their protein products appear to relate to various cell proliferative or degenerative disorders, especially those involving ovarian tumours, such as germ line tumours and granulosa cell tumours, or infertility, such as premature ovarian can modulator compounds are provided. Modulators also have contraceptive or fertility enhancing activities
                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of a human ovary-specific O1-180 CC polynucleotide. In mice, loss of O1-180 is associated with female CC infertility and subfertility. The invention provides ovary-specific and CC copyte-specific murine and human O1-180, O1-184 and O1-36 CC polynucleotides and polypeptides. These genes and their protein products CC appear to relate to various cell proliferative or degenerative disorders, CC especially those involving ovarian tumours, such as germ line tumours and CC granulosa cell tumours, or infertility, such as premature ovarian CC failure. The invention provides a method for detection of a cell CC with the expression of O1-180, O1-184 or O1-236. It also provides a CC with the expression of O1-180, O1-184 or O1-236, and a CC method for treating such disorders by using an agent which suppresses or CC enhances the respective activities of O1-180, O1-184 or O1-236, and a CC method of screening for compounds that interact and/or modulate the CC expression or activity of the ovary-specific genes. These compounds are possible contraceptive or fertility enhancing agents. The modulator is CC preferably a polypeptide, small molecule or polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               condoms, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonuclectides may be derived from sequences AAX55272-74. These multiple target oligonuclectides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, respiratory diseases syndrome, pain, cystic fibrosis, pulmonary hypertension, cystic fibrosis, pulmonary hypertension, and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, panoreatic cancer, breast cancer, lung cancer, melanoma, hepatic metastases, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                 The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, tugal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chang H,

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to pathogenic the pathogenic infection. The present sequence was used to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pathogenic infection bacterial, fungal or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           D,
                                                      The specification describes antisense oligonucleotides (AAX52869-X55271)
CC directed against at least 2 mRNAs selected from target genes, coding and concoding regions of RNAs corresponding to target genes, coding and codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
CC end and the juxta-section between coding and non-coding regions and all conditions or mixtures. The antisense oligonucleotides may be derived conditions or mixtures. The antisense oligonucleotides may be derived compared to the sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX5180-271) can be used for the antisense treatment of cliseases and conditions. Typical diseases and conditions are those cassociated with impaired respiration and inflammation, including lung cliseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, cut associated with impaired respiration, inflammation, allergic rhinitis, coliseases (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, bain, cystic fibrosis, pulmonary hypertension, coliseases (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, entanoma, hepatic metastasses, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                impaired respiration; inflammation; lung disease; pulmonary vasoconstriction; inflammation; altergic rhinitis; pulmonary vasoconstriction; inflammation; altergic rhinitis; acute asthma, altergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; breast cancer; lung cancer; pancreatic cancer;

(I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycin synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-ABZ37516)
                                                                                                                                                                                                                                                                                                                                    Sequence 987 BP; 121 A; 358 C; 371 G; 137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New avilamycin derivatives, useful for treatment of infections, and nucleic acid encoding avilamycin synthesis enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 13; Page 244-248; 319pp; German

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to avilamycin derivatives (I) with antibacterial, virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycin synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-ABZ37516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 59816 BP; 8760 A; 21053 C; 21088 G; 8915 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1;

(I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in human or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of a nucleic acid encoding avilamycin synthesis enzymes from the Streptomyces viridochromogenes Avilamycin A biosynthetic gene cluster (ABZ37515-ABZ37516)

XF22 DNA was isolated from a M. tuberculosis strain Erdman genomic DNA expression library using sera from patients having extrapulmonary tuberculosis. It bears no similarity to known sequences. The invention relates to methods and compositions for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W6479) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of a M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonuclectide probes and primers. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated Mycobacterium tuberculosis polypeptides and DNA - used develop products for the detection of M. tuberculosis infection and diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the 5' region of DNA coding for an antigenic portion of Mycobacterium tuberculosis antigen XP22; 3' DNA is provided in AAV44437.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Reed SG, Sk

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Reed SG,

The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Reed SG, Skeiky YAW, Dillon DC, Covedvick TS, Twardzik DR, Lodes MJ,
